Subject: Consultation on Development of Mobile TV services

20/04/2008 18:53

As a R&D company in HongKong providing cutting-edge VGA (DVD) quality Mobile TV total solution for cellphone system using 4 primaries colors RGBW display, we would like to add the following comments:

- 1) Since HongKong is part of China, HongKong should adopt the Mobile TV standard approved and used in China for compatibility
- 2) HongKong has played the role of innovator in introduction of new technologies in the past, It should remain in this leading role in Mobile TV ! DVD (VGA) video is the common recognised video quality known to everyone and cellphone display will migrate soon to VGA resolution in the future, we suggest to study the possibility to broadcast or streaming DVD (VGA) resolution video instead of the low resolution QVGA video adopted today in order to create a leap frog in Mobile TV technology for HongKong and to set an example for China as well !
